

Northfield

Model 7500 Automatic Stacker

The Model 7500 Stacker is fully automatic, and will handle most lumber commonly run through tenoners and trim saws. The stacker builds a load up to five feet high on shop trucks skids or pallets, and is adjustable to different load widths. The machine is completely self-contained and needs no other equipment to go with it. It is ruggedly constructed, and yet portable so it can be used on different jobs. Maintenance is easy since the machine has no hydraulics, pneumatics, or complicated electronics.

VERSATILE — handles a wide range of sizes and materials. Finished loads are accessible from three sides.

PORTABLE — can be moved by one man for use with different machines in your plant.

SELF-CONTAINED — no other equipment such as scissors lifts to buy.

LABOR SAVING — reduces handling costs, eliminates a tedious job.

Northfield AUTOMATIC STACKER
